

**Relationship between Achievement Motivation Element Factors and Intention of
Plagiarism Toward College Student in Islam Point of view**

Name : Dhaniar Gusna Fatimah

ABSTRACT

Some previous studies have shown to link plagiarism with situational factors than other internal factors that actually interesting to be investigated such as achievement motivation. The purpose of this study is to see the correlation between intention of plagiarism with achievement motivation's factors (hope of success and fear of failure). This is a quantitative study with correlational method. There are 210 participants that have given the scale of hope of success, fear of failure, and intention of plagiarism. The result shows $r = 0,158$ with $p = 0,022$ on correlation between fear of failure with intention of plagiarism. This study found no correlation between hope of success with intention of plagiarism. Therefore, this study conclude that individual with intention of plagiarism is more influenced by the feeling of fear of failure. Islam is clear about the recommendation of ignoring plagiarism behavior by improving iman with some activities such as dzikir, praying, and ikhtiar.
